Honda Paint Code Identification System

Originally Honda used a number at the end of their paint code to determine the factory where the vehicle was manufactured. This number also determined the correct DuPont formula to use. In 1998 Honda changed the Vehicle Paint I.D. labels. The number was removed from the paint code and in its place was a letter to designate the country of origin. This letter factory code can also be found on the bottom right corner of the paint tag or by the 11th digit of the V.I.N. (Vehicle Identification number).

For example if the V.I.N. is: 2 H G E J 6 3 2 C 1 **H** 0 0 0 0 0 1

The 11th digit is a H; therefore the vehicle was made in Canada.
For factory code explanation - Please refer to the chart below.

Factory Code	Production Plant Location
A = 3	Marysville, Ohio (United States)
B	Alabama
C = 1	Sayama (Japan)
H = 4	Alliston, Ontario (Canada)
L = 5	East Liberty, Ohio (United States)
S = 2	Suzuka (Japan)
T = 6	Tochigi (Japan)
G = 15	El Salto (Mexico)
U = 8	Swinden (UK)

For **Japan** production vehicles, the letter or number is NOT necessary to retrieve the proper formula. Just enter the code without any number or letters.

For example: **B96P** would retrieve DuPont stock code M1605.

JAPAN: No need for a letter or number
